PROFESSIONAL SUMMARY

Backend leaning full-stack engineer with hands-on experience building and shipping end-to-end products using Go, Python, PostgreSQL, Django, FastAPI, and React. Experienced in API and schema design, production debugging, external system integrations, observability, and AI powered workflows, demonstrated through real world research work and self built products spanning personal productivity, incident management, and geospatial applications.

EDUCATION

State University of New York

Master of Science in Computer Science

Aug 2023 – May 2025

Binghamton, NY

Visvesvaraya Technological University

Bachelor of Engineering in Computer Science

Aug 2018 – June 2022

Bengaluru, India

TECHNICAL SKILLS

Languages: Go, Python, Java, JavaScript, SQL

Backend & Frameworks: Go HTTP Services, FastAPI, GraphQL, Express.js, Node.js, Flask, Django, Django REST Framework

Frontend: React, Angular, Next.js, Leaflet, Jest, React Testing Library, Redux, HTML5, CSS3

Databases & Search: PostgreSQL, PostGIS, MongoDB, SQL Server, SQLite, Typesense

Cloud & DevOps: AWS S3, Azure Blob Storage, Azure Active Directory, Docker, GitHub Actions, PowerShell

AI & Data: Structured LLM Outputs, AI Agents & Tool Calling, OpenAI API, Kafka, Spark Streaming, ClickHouse

Observability: OpenTelemetry, Promtail, Grafana Loki

Certifications: Machine Learning – Stanford Online, Python – Google, SQL – University of Michigan

PROFESSIONAL EXPERIENCE

Binghamton University, School of Computing

Research Intern (OPRA)

Aug 2025 – Feb 2026

Binghamton, NY (Remote)

- Contributed to OPRA, an open-source Django based platform spanning 4 core mechanisms. Preference reporting, voting, matching, and allocation, developing new features and supporting a faculty led database migration
- Built the MAPS feature for OPRA's mock election extension, integrating 6 election and geospatial data domains (elections, candidates, votes, schools, districts, map layers) through a PostGIS-backed Django REST Framework API and an import pipeline for real New Jersey congressional district geometries. Developed a React/Leaflet map with 3 key interactions, candidate based district styling, geographic filtering, and hover level vote statistics

Find Me

Software Engineer, Full Stack

Nov 2024 – Mar 2025

Charlotte, NC

- Built a store and product search feature letting users search stores (e.g., Walmart, Target, Costco) or products, cross-referencing which stores carried a product and its in-store aisle location, designing the PostgreSQL and MongoDB schema across 3 core entities (stores, products, aisle locations) and building the REST endpoints in Flask, including `/search` and `/documents` routes
- Reduced search latency by 40% by implementing 200-250ms input debouncing on the React frontend, working with Typesense's typo-tolerant search
- Contributed to observability integration across 3 tools (OpenTelemetry, Promtail, Grafana Loki) for application logging and monitoring

Cognizant Technology Solutions

Programmer Analyst

Mar 2022 – Jun 2023

Bengaluru, India

- Supported Azure Active Directory and JD Edwards, resolving production issues through log analysis, SQL investigation, and system configuration debugging.
- Automated IAM administrative tasks with PowerShell and investigated API/data-flow issues between Java/Python services, AWS S3, Azure Blob Storage, and enterprise systems.

PROJECTS

TracePilot

Live Demo

FastAPI, PostgreSQL, React, OpenTelemetry, Docker

- Built a full-stack observability and incident-management platform simulating SRE tooling, with a core data model spanning 5 entities: services, deployments, health checks, incidents, and rollback history.
- Implemented a rollback workflow linking failed deployments to incidents, with distributed tracing for real-time visibility across deployments, health checks, and incidents.

OpenLoop

GitHub

Go, PostgreSQL, React, Gmail API, Claude & OpenAI

- Built OpenLoop to surface refunds, replies, deadlines, and deliveries buried in email, connecting real Gmail accounts through Google OAuth and turning relevant messages into trackable items.
- Added incremental Gmail sync, LLM extraction, and lifecycle tracking to merge related emails, handle timezone-aware deadlines, and require approval before sending follow-ups.
